---

# Implications of the $B$ -Mesogenesis Model on the Lifetime and Mixing of $B$ -mesons

---

Ali Mohamed

Ongoing collaboration with: Alexander Lenz, Maria Laura Piscopo, Aleksey Rusov, Zachary Wüthrich

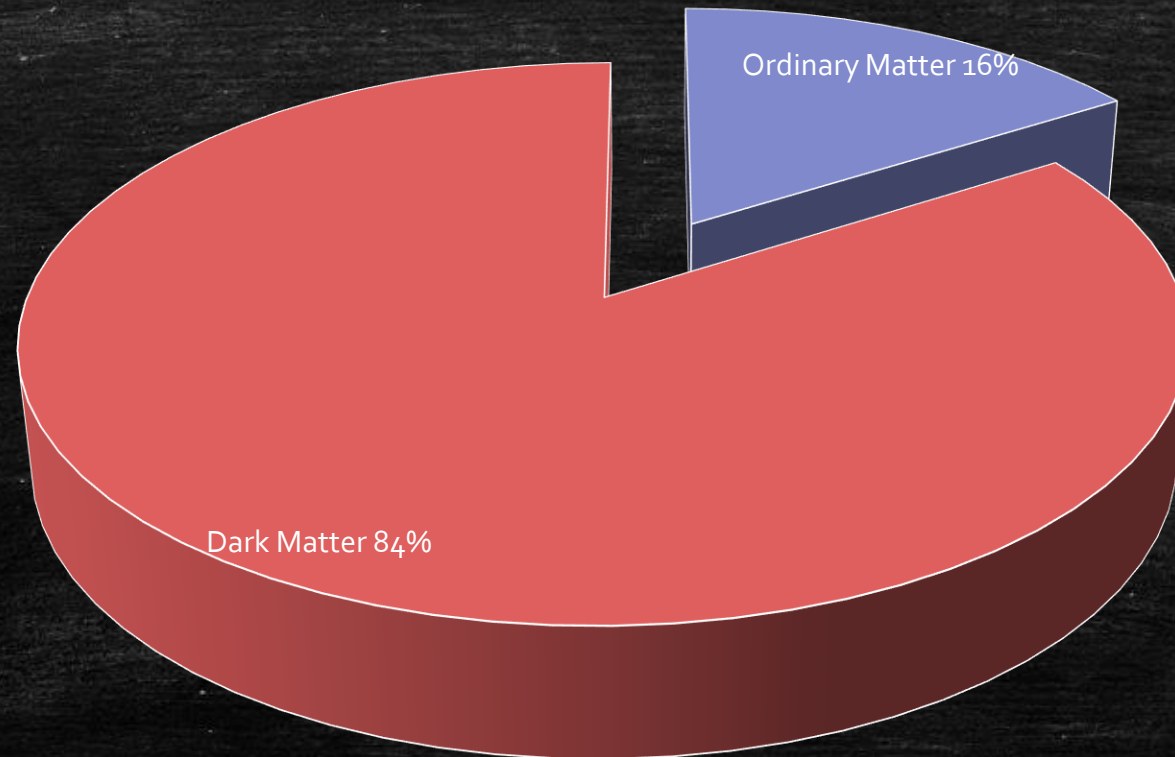

Part I:  
Open Questions

# 1. Dark Matter

Total Mass of the Universe

"N. Aghanim et al. (Planck),  
arXiv:1807.06209."

## 2. Matter-antimatter Asymmetry in the Universe

---

- Baryon asymmetry measurement:

"N. Aghanim et al. (Planck),  
arXiv:1807.06209."

$$Y_B = \frac{n_B - n_{\bar{B}}}{s} = (8.718 \pm 0.004) \times 10^{-11}.$$

- What happened in the early Universe? **Baryogenesis!**
- Sakharov's Conditions for Baryogenesis:
  1. C and CP violation
  2. Departure from Thermal Equilibrium
  3. Baryon Number Violation

Part II:

# *B*-Mesogenesis Model

---

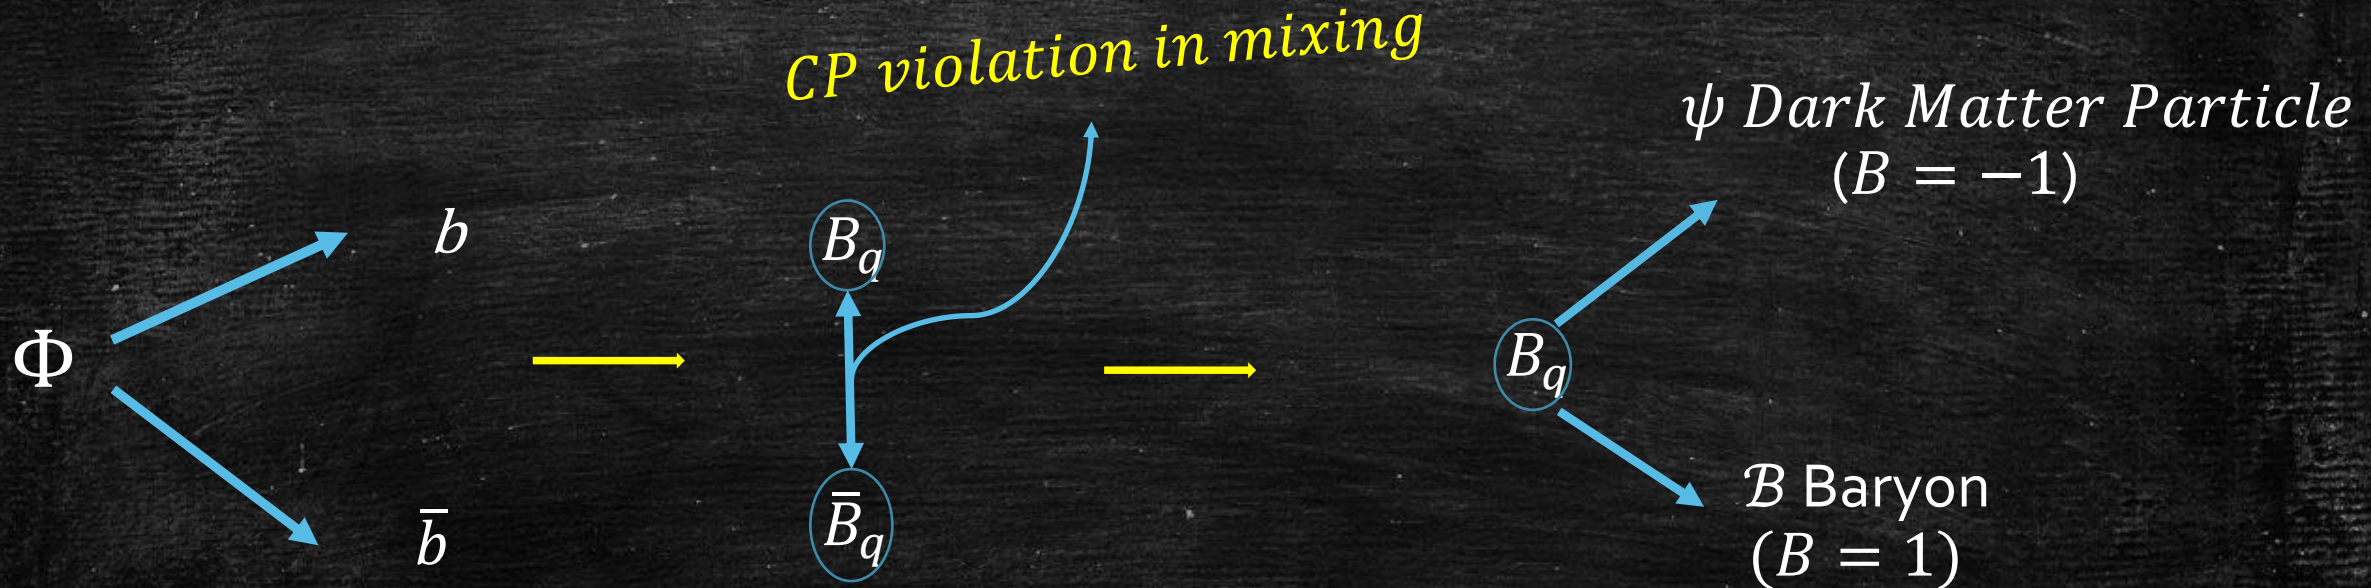

*Can matter-antimatter asymmetry and dark matter be addressed in one model?*

"G. Elor, M. Escudero, A. E. Nelson,  
arXiv:1810.00880."

"G. Alonso-Álvarez, G. Elor and M. Escudero,  
arXiv:2101.02706."

# **B-Mesogenesis**

$$M_\Phi \geq 11 \text{ GeV.}$$

$$T_R \sim 15 \text{ MeV} < T_{QCD} \sim 500 \text{ MeV.}$$

$$\mathcal{L}_{-1/3} = - \sum_{i,j} y_{u_i d_j} Y^* \bar{u}_{iR} d_{jR}^c - \sum_k y_{\psi d_k} Y \bar{\psi} d_{kR}^c + h. c.$$

$$\mathcal{L}_{2/3} = - \sum_{i,j} y_{d_i d_j} Y^* \bar{d}_{iR} d_{jR}^c - \sum_k y_{\psi u_k} Y \bar{\psi} u_{kR}^c + h. c.$$

**Explicit Model:**

$$\mathcal{L}_{-1/3} = - \sum_{i,j} y_{u_i d_j} Y^* \bar{u}_{iR} d_{jR}^c - \sum_k y_{\psi d_k} Y \bar{\psi} d_{kR}^c + h.c.$$

$$u_i = u, c,$$

$$d_j = b, d, s.$$

Integrating out the heavy scalar  $Y$

$$\mathcal{H}_{-1/3} = - \frac{y_{ub} y_{\psi d}}{M_Y^2} i \epsilon_{\alpha\beta\gamma} (\bar{\psi} d_R^{c\alpha}) (\bar{u}_R^\beta b_R^{c\gamma}) - \frac{y_{ub}^* y_{\psi d}^*}{M_Y^2} i \epsilon_{\alpha\beta\gamma} (\bar{b}_R^{c\alpha} u_R^\beta) (\bar{d}_R^{c\gamma} \psi) + \{d \leftrightarrow b\}.$$

→ **New effective operator for the  $b$ -quark**

# Implications to the $B$ -Meson Observables

---

- What is the contribution to the ratio  $\frac{\tau(B^+)}{\tau(B^0)}$ ?
- What is the contribution to the mixing observables;  
 $M_{12}, \Gamma_{12}, a_{sl} = \text{Im}\left(\frac{\Gamma_{12}}{M_{12}}\right)$ ?

# Part III: Heavy Quark Expansion

---

How to compute inclusive decay of  $B$  mesons.

# HQE: Heavy Quark Expansion

Optical Theorem for decay width:

$$\Gamma(B) = \frac{1}{2m_B} \text{Im} \langle B | \mathcal{T} | B \rangle,$$
$$\mathcal{T} = i \int d^4x \text{T} \{ \mathcal{H}_{eff}(x), \mathcal{H}_{eff}(0) \}.$$

HQE:

$$\Gamma(B) = \Gamma_3 + \Gamma_5 \frac{\langle \mathcal{O}_5 \rangle}{m_b^2} + \dots + 16\pi^2 \left[ \tilde{\Gamma}_6 \frac{\langle \tilde{\mathcal{O}}_6 \rangle}{m_b^3} + \tilde{\Gamma}_7 \frac{\langle \tilde{\mathcal{O}}_7 \rangle}{m_b^4} + \dots \right].$$

$$\frac{\tau(B^+)}{\tau(B^0)} = 1 + 16\pi^2 \left[ \frac{(\tilde{\Gamma}_6 \langle \tilde{\mathcal{O}}_6 \rangle)_{B^0} - (\tilde{\Gamma}_6 \langle \tilde{\mathcal{O}}_6 \rangle)_{B^+}}{m_b^3} + \dots \right] \times \tau_{B^+}^{Exp}.$$

# Lifetime Diagrams

$\mathcal{L}_{-1/3}$ : 13 Diagrams for  $B_d$ , 16 Diagrams for  $B^+$

$\mathcal{L}_{2/3}$ : 6 Diagrams for  $B_d$ , 2 Diagrams for  $B^+$

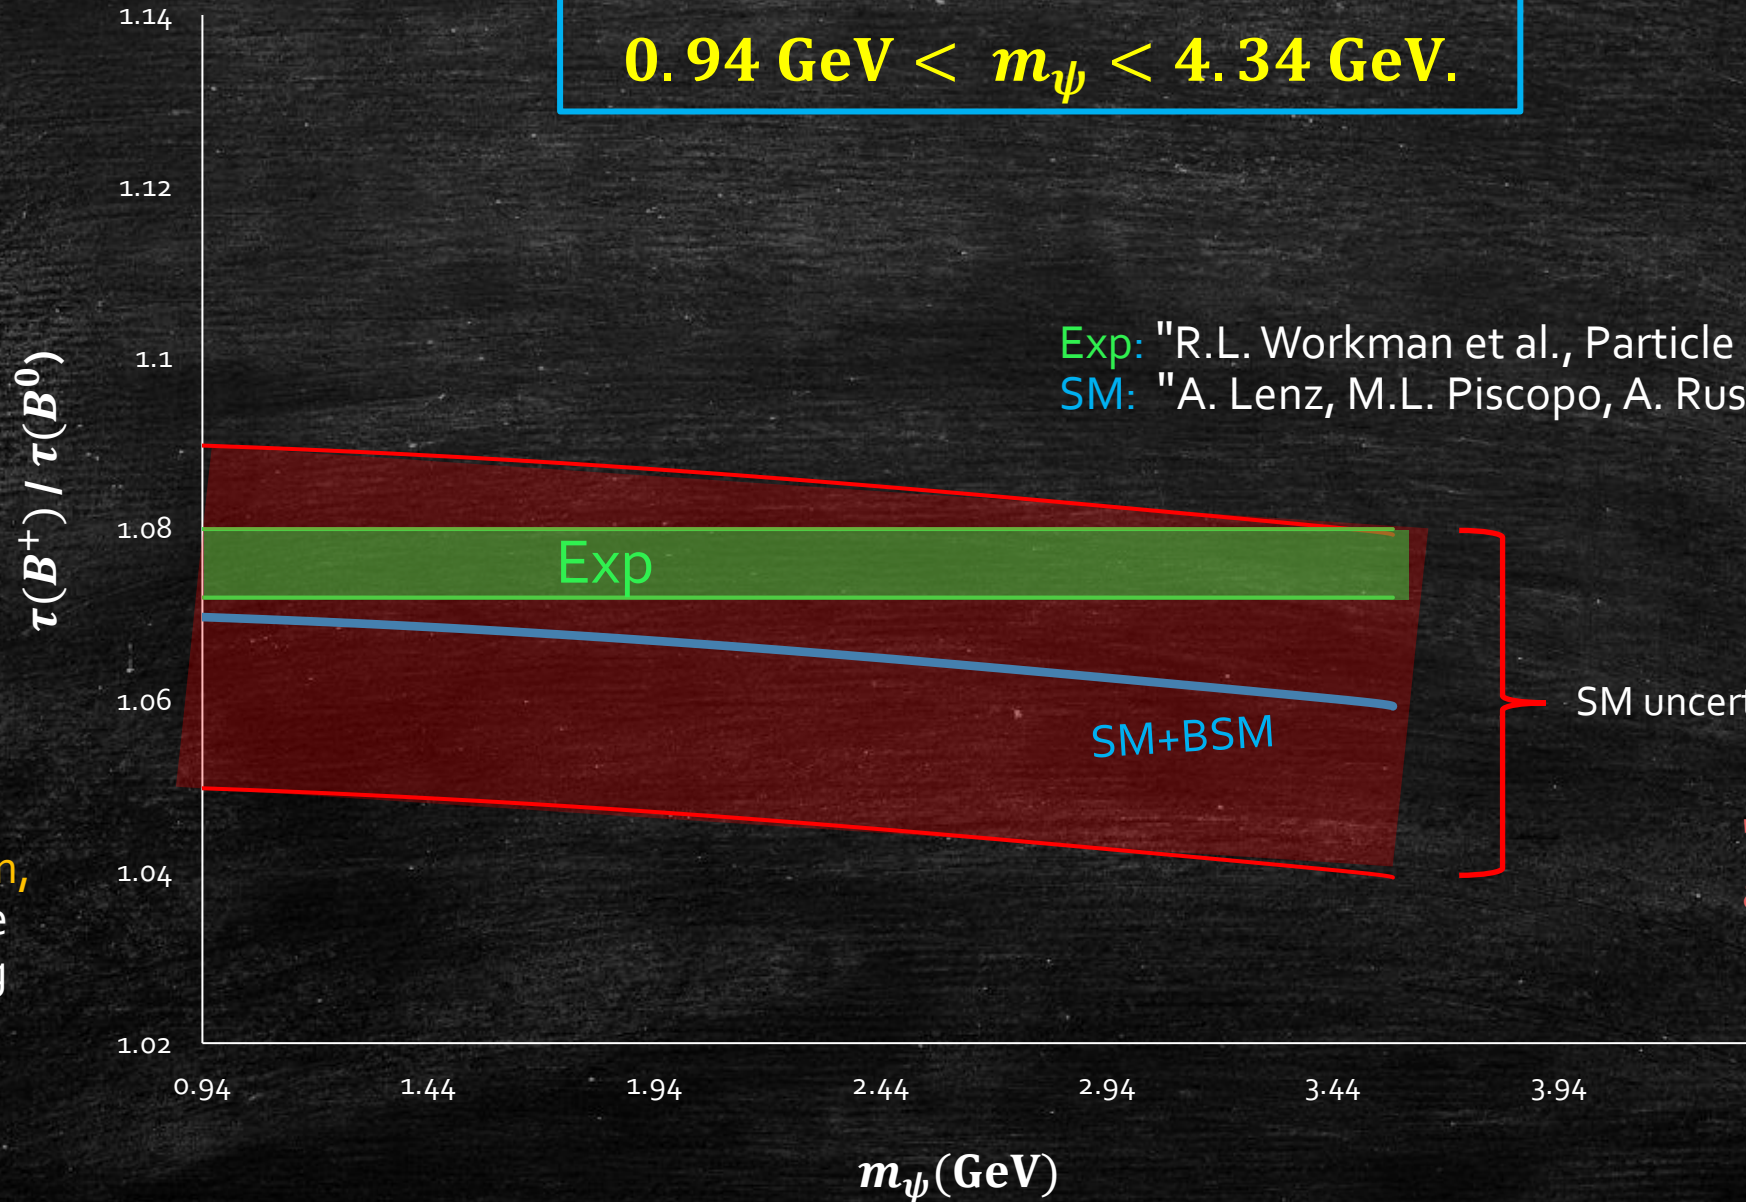

Part IV:  
(Preliminary)  
Results

# $\mathcal{L}_{2/3}$ Total Contribution to the ratio $\tau(B^+) / \tau(B^0)$

**0.94 GeV <  $m_\psi$  < 4.34 GeV.**

Exp: "R.L. Workman et al., Particle Data Group, 2022."  
SM: "A. Lenz, M.L. Piscopo, A. Rusov, arXiv: 2208.02643."

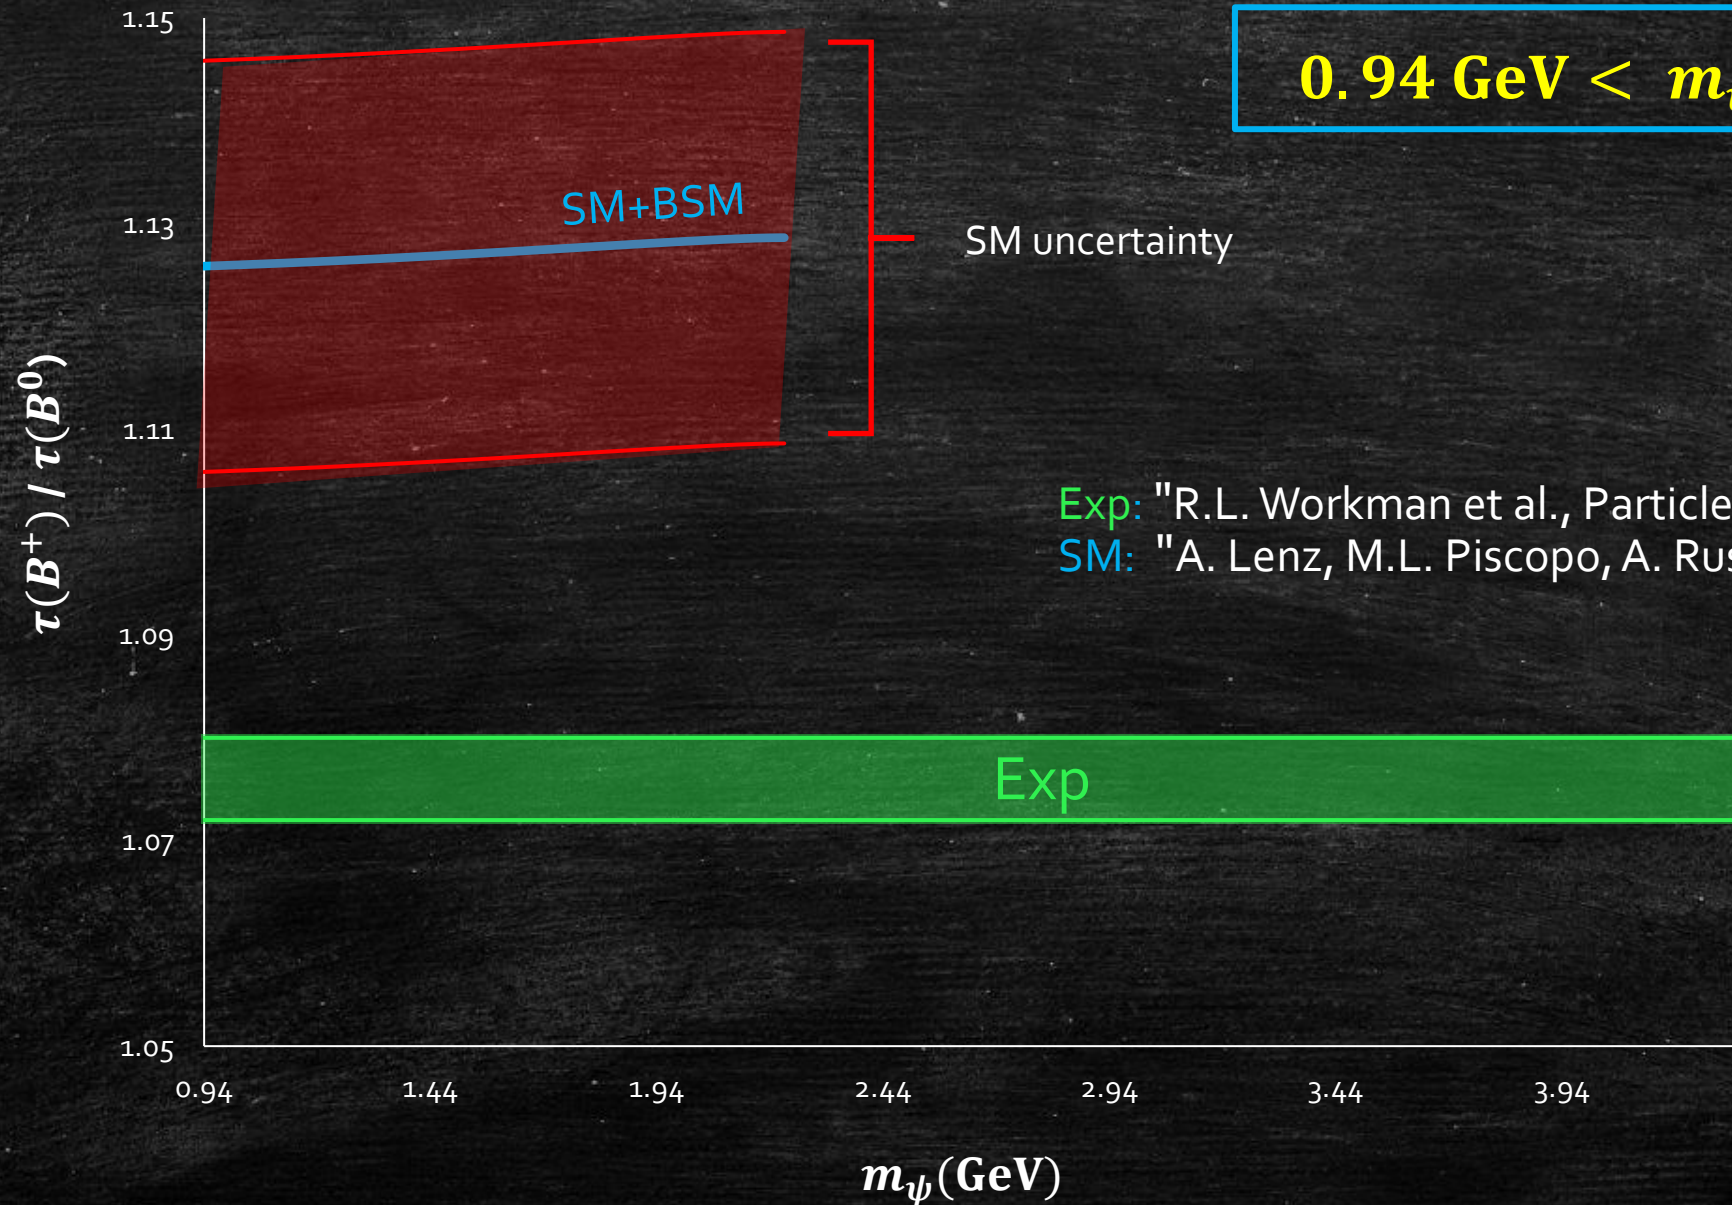

SM uncertainty

"See Mathew,  
and Zachary's talks"

Following [A.Khodjamirian, M.Wald '22], we set the coupling constant to the max value

$\mathcal{L}_{-1/3}$  Total Contribution to the ratio  $\tau(B^+) / \tau(B^0)$

$0.94 \text{ GeV} < m_\psi < 4.34 \text{ GeV}$ .

Exp: "R.L. Workman et al., Particle Data Group, 2022."  
SM: "A. Lenz, M.L. Piscopo, A. Rusov, arXiv: 2208.02643."

# Mixing Diagrams

$\mathcal{L}_{-1/3}$ : 9 Diagrams for  $B_d$

$\mathcal{L}_{2/3}$ : 2 Diagrams for  $B_d$

Part IV:

Summary and Outlook

# Summary and Further Questions

---

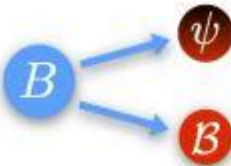

- The  $B$ -Mesogenesis links the matter-antimatter asymmetry to the dark matter
- The model introduces new decay channels to the  $b$ -quark
- We have calculated the contribution to the ratio  $\tau(B^+) / \tau(B^0)$ . In  $\mathcal{L}_{-1/3}$ , the contribution is significant! For  $\mathcal{L}_{2/3}$ , due to the large SM uncertainty, there are no significant constraints on  $m_\psi$ , beyond those imposed by the model
- Can we find a region in the parameter space which can accommodate these lifetime contributions?
- Can the new proposed decay introduce enough CP violation which can explain the asymmetry  $Y_B$ ?
- What is the contribution to  $B_s$ ?
- We can investigate the contribution of higher-order terms, e.g. the **Darwin term**

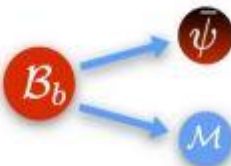

# Collider Signals of Baryogenesis and Dark Matter from B Mesons (*B-Mesogenesis*)

## Direct Signals

**Semileptonic asymmetry:**  $A_{SL}^q > 10^{-4}$  Belle II  
LHCb  
ATLAS  
CMS

**New B meson decay:**  BaBar  
Belle  
Belle II  
LHCb

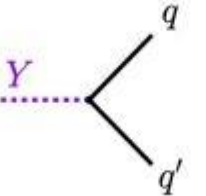

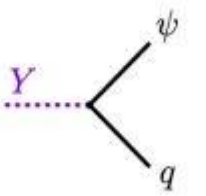

**New b-Baryon decay:**  LHCb  
ATLAS??  
CMS??

## Indirect Signals

**B<sup>0</sup> meson CPV and oscillation observables:** LHCb  
Belle II  
ATLAS  
CMS

$\phi_{12}^{d,s}$     $\Delta M_{d,s}$     $\Delta \Gamma_{d,s}$

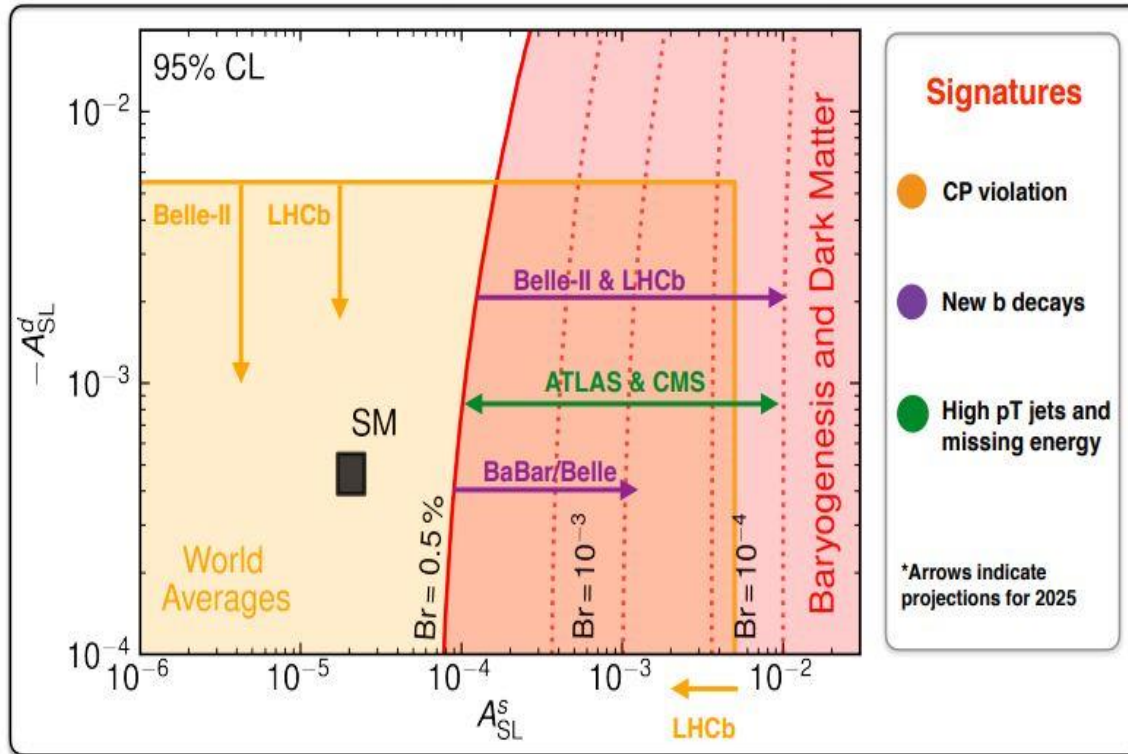

**New TeV-scale color-triplet scalar,  $Y$**

ATLAS  
CMS

$$Y_B \simeq 8.7 \times 10^{-11} \frac{\text{Br}(B \rightarrow \psi \mathcal{B} \mathcal{M})}{10^{-3}} \sum_q \alpha_q \frac{A_{\text{SL}}^q}{10^{-3}},$$

### The B-Mesogenesis Parameter Space

Operator and Decay	Initial State	Final State	$\Delta M$ (MeV)
$\mathcal{O}_{ud} = \psi b u d$ $\bar{b} \rightarrow \psi u d$	$B_d$	$\psi + n (udd)$	4340.1
	$B_s$	$\psi + \Lambda (uds)$	4251.2
	$B^+$	$\psi + p (duu)$	4341.0
	$\Lambda_b$	$\bar{\psi} + \pi^0$	5484.5
$\mathcal{O}_{us} = \psi b u s$ $\bar{b} \rightarrow \psi u s$	$B_d$	$\psi + \Lambda (usd)$	4164.0
	$B_s$	$\psi + \Xi^0 (uss)$	4025.0
	$B^+$	$\psi + \Sigma^+ (uus)$	4090.0
	$\Lambda_b$	$\bar{\psi} + K^0$	5121.9
$\mathcal{O}_{cd} = \psi b c d$ $\bar{b} \rightarrow \psi c d$	$B_d$	$\psi + \Lambda_c + \pi^- (cdd)$	2853.6
	$B_s$	$\psi + \Xi_c^0 (c ds)$	2895.0
	$B^+$	$\psi + \Lambda_c^+ (dcu)$	2992.9
	$\Lambda_b$	$\bar{\psi} + \bar{D}^0$	3754.7
$\mathcal{O}_{cs} = \psi b c s$ $\bar{b} \rightarrow \psi c s$	$B_d$	$\psi + \Xi_c^0 (csd)$	2807.8
	$B_s$	$\psi + \Omega_c (css)$	2671.7
	$B^+$	$\psi + \Xi_c^+ (csu)$	2810.4
	$\Lambda_b$	$\bar{\psi} + D^- + K^+$	3256.2
