

How to collect more metadata

W. Mexner

IBPT – Institut für Beschleunigerphysik und Technologie

From proposal to publication

Who collects the Metadata?

- Control System does not know enough!
- Data of a proposal system is too generic for a specific dataset
- Some information still in lab book.
- Datasets are often moved to next storage tier independent from metadata

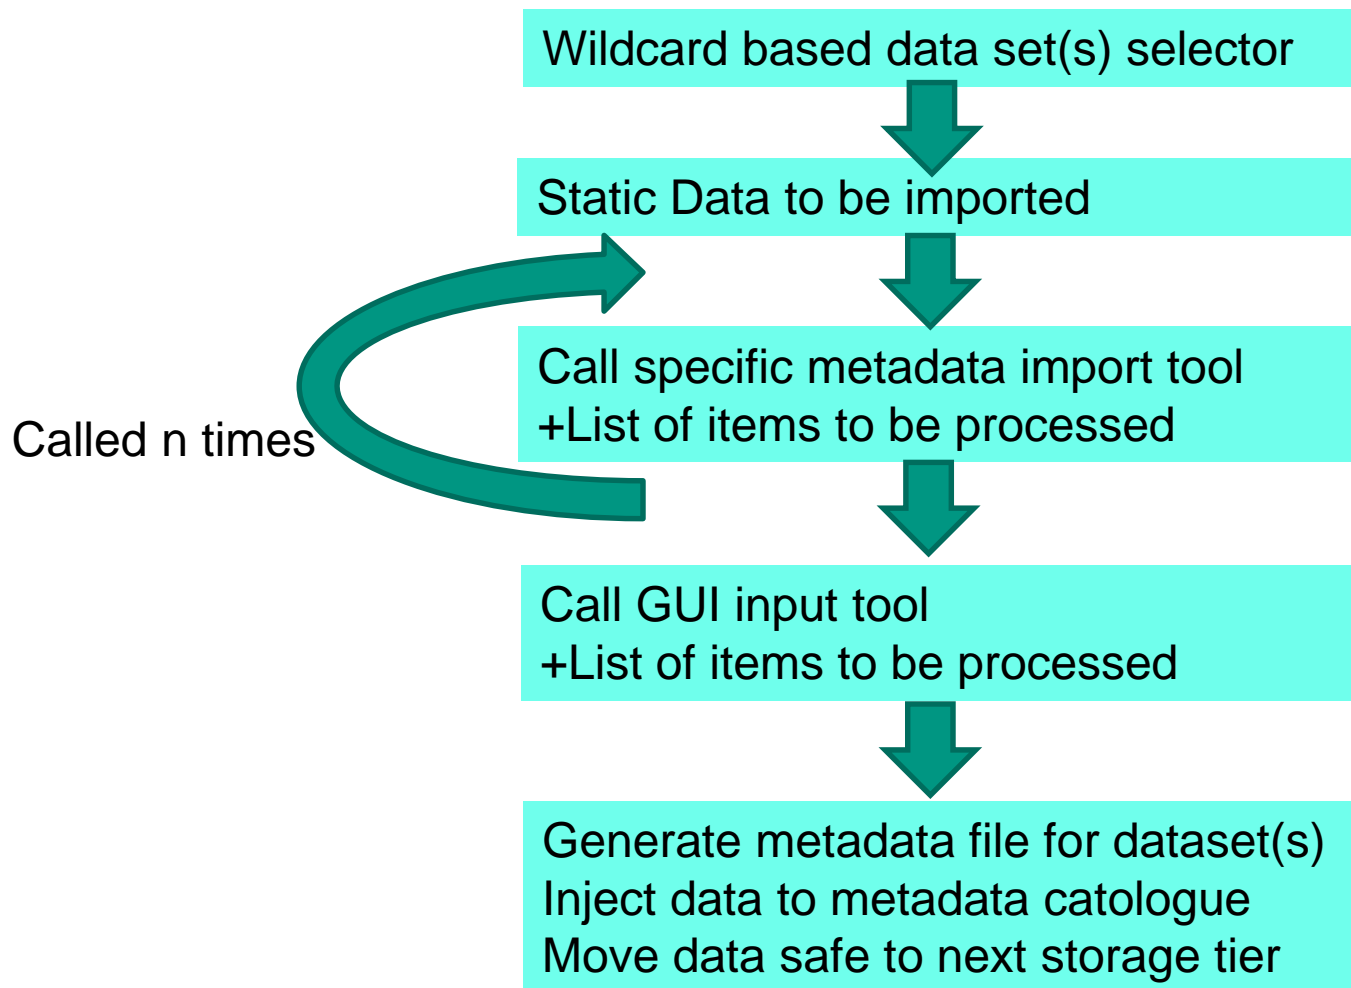

⇒ Required is an easy tool to enrich data set with metadata, which people „likes“ to use

Idea: Offer comfortable data management tool

⇒ Offer generic copy tool, which

- ⇒ collects automatical metadata
- ⇒ adds further metadata
- ⇒ Easy to configure
- ⇒ Injects data to Nova metadata catalogue
- ⇒ Moves data safely to next storage level
- ⇒ Easy to understand ASCII-Joblist (Json Format)
 - ⇒ Easy to reuse for reoccurring job

Generic metadata management tool
